CONFIDENTIAL AO REPORT · ANSWER OPTIMIZATION

Art Ramirez

napalisting.com

Prepared for Art Ramirez · Napa, CA · November 8, 2026

Great reviews, but few.
Hard-to-read website.

HARD FOR MACHINES TO READ

12 of 21 website checks pass · 8 need a fix · 1 not scored

How readable your website is to ChatGPT, Gemini, Claude, Perplexity, Google AI Mode, and the tools that now answer for customers.

Entity	Content	Code	Agents
pillar 1	pillar 2	pillar 3	pillar 4

EXECUTIVE SUMMARY

Where You Stand Today

THE PROBLEM THIS REPORT IS ABOUT

Your customers now ask AI — ChatGPT, Siri, Google's AI — who to choose. AI answers with one or two names. Most local businesses are invisible to it — not by choice, but by configuration. Every one of those gaps is fixable. (Google says AI Mode passed 1 billion monthly users in its first year and AI Overviews passed 2.5 billion: Google, May 2026.)

Hard for machines to read. Your reviews are excellent in quality: 5.0 stars from 13 Google reviews, every one answered, and 5.0 on Yelp across 38 recommended reviews. There are fewer of them than nearby agents show. Separately, the machines can't read your own website. Your website shows crawlers a page title and the words “Loading NapaListing.com”, about 144 characters of text, because your words only appear after JavaScript runs. Several profiles still name an old brokerage. In our tests, searching your name finds you, but your own site is rarely the page that does it. For searches by area or service, most tools named other agents; Google's AI Mode and Gemini named you in some.

WHAT REAL CUSTOMERS ALREADY SAY

5.0 stars across 13 reviews on Google (read on the live Google Maps listing, November 8, 2026) and **5.0 on Yelp across 38 recommended reviews**. Every Google review is answered, and the ratings are as good as ratings get. The number is small next to nearby agents, who show 28 to 83 on Google (it varies by location), so more honest reviews is one of the clearest improvements. Separately, this report measures whether machines can see what you already have.

WHAT YOU TOLD US, AND HOW THIS REPORT FITS

You told us your clients come from many places and that you work the old-school way, by calling and prospecting. This report measures something different: how clearly your website and profiles show up online. We are not saying it replaces how you already work, or that fixing it would change your results on its own. We see two ways it could help. **First,** it gives some people another way to find you without a call. **Second,** it may back up your calls: someone you have spoken with may look you up afterward, and today they would find an old brokerage name, hours that disagree and a website that shows almost nothing. That second point is our reasoning, not something we have tested. We would like to hear what is working for you today and what you would like more of.

Your four pillars

AI companies don't publish a scoring rubric. These four pillars are how we organize the factors of Answer Optimization (AO, which the industry also calls AEO and GEO). Each pillar's status comes from the 21 automated checks.

Pillar	Status	The question it answers
Entity	**Needs work**	Can machines identify and trust you?
Content	**Weak**	Do your pages hand them quotable answers?
Code	**Healthy**	Is your site machine-readable?
Agents	**Weak**	Could an AI complete a booking?

COVERAGE CHECK

Which AI Crawlers Are Allowed In

Every AI assistant, answer engine and agent platform relies on crawlers that must be allowed in. We checked your robots.txt against all ten ecosystems we track. **Allowed in is not the same as able to read.** A crawler that is allowed still downloads only what the page contains, and yours contains a title and the words “Loading NapaListing.com” (see the next pages).

AI ecosystem	robots.txt	What we saw
ChatGPT / OpenAI ChatGPT answers, search citations	**PARTIAL**	GPTBot (OpenAI's training crawler) is blocked. OAI-SearchBot, the crawler behind ChatGPT search, is not blocked in robots.txt.
Claude / Anthropic Claude answers and research citations	**ALLOWED**	Open in robots.txt. A test request labeled ClaudeBot got a 403 from the site's server; we could not confirm it affects the real crawler.
Gemini / Google AI Gemini, AI Mode, AI Overviews	**ALLOWED**	Googlebot and Google-Extended are allowed.
Perplexity Perplexity answers	**ALLOWED**	PerplexityBot is allowed.
Meta AI Meta AI in WhatsApp, Instagram, Facebook	**BLOCKED**	meta-externalagent and meta-webindexer are blocked.
Apple Intelligence / Siri Siri and Apple Intelligence	**ALLOWED**	No rule blocks Apple's crawler.
Amazon Alexa+ Alexa+ recommendations	**ALLOWED**	Open in robots.txt. A test request labeled Amazonbot got a 403 from the server; unconfirmed for the real crawler.

AI ecosystem	robots.txt	What we saw
DuckDuckGo AI DuckAssist	**ALLOWED**	No rule blocks it.
Model training (Common Crawl) Training data for many models	**ALLOWED**	Open in robots.txt. CCBot test got a 403 from the server; unconfirmed.
ByteDance / Doubao TikTok-ecosystem AI	**ALLOWED**	Open in robots.txt. Bytespider test got a 403; unconfirmed.

YOUR RESULT

8 of 10 ecosystems are allowed in by your robots.txt, 1 is partly blocked (ChatGPT's training crawler) and 1 is blocked (Meta AI). A scout saw the same robots.txt on 15 of 15 other sites built on your platform, iHouseweb, so these blocks are Likely a platform default and not your choice. Separately, robots.txt tells *every* crawler to skip your market-report and listing pages. The 403 responses are test results from our own machine, not proof about the real crawlers. **Being allowed in does not mean being able to read:** the crawlers that are allowed still receive a page with almost no text, which is why the readable-text check is the one that limits the overall result.

WHY ACCESS ALONE ISN'T ENOUGH

Being readable is step 1 of 4: **1) READ** crawlers can reach your pages, **2) UNDERSTAND** schema and answer-shaped content say exactly what you offer, **3) TRUST** consistent profiles, reviews and mentions confirm you're real and good, **4) TRANSACT** there's a path to book or buy. Most engines are allowed in, so step 1 is mostly open. Step 2 is where it breaks: an allowed crawler downloads your title and “Loading NapaListing.com”, not your words. Steps 3 and 4 are where your profiles and booking path fall short.

THE DETAIL

The 21 Scored Checks, One by One

These checks are what this report's website findings are built from. Every result comes from our scan of your live homepage on November 8, 2026, not from anything you told us. Items marked FIX point to the numbered fixes on the pages that follow. Because crawlers see almost no text (the “Content readable without JavaScript” check), the overall result stays at “Hard for machines to read” however many other checks pass.

Check	Result	What we found	Solved in
JSON-LD structured data present	**PASS**	A RealEstateAgent block is in the page source.	—

Check	Result	What we found	Solved in
Organization / LocalBusiness identity schema	PASS	Found, with phone, email, address and price range. Gaps: no profile-links list (sameAs), your name appears only inside an image file name, no license number, no reviews, no languages, and the brokerage is spelled “Coldwell Bankers”.	Fix 3
FAQPage schema	FIX	No FAQPage markup.	Fix 3
All major AI engines allowed to read your site	FIX	robots.txt blocks OpenAI's GPTBot and Meta's two crawlers (training-only, per our scanner's note).	Fix 2
llms.txt present	N/A	Not scored this run: the scanner could not read it. A direct request returned 404, so it does not exist.	—
sitemap.xml present	PASS	Found, listing 395 URLs.	—
Indexable, no noindex tag	PASS	No noindex tag.	—
Snippet-eligible (AI Overviews kill switch off)	PASS	No nosnippet or max-snippet restriction.	—
Copilot-eligible (Microsoft's AI kill switch off)	PASS	No noarchive or nocache tag.	—
Content readable without JavaScript	FIX	About 144 characters of visible text in the raw page. A 742 KB data script carries the content and is built into the page after it loads. This is the check that limits the overall result.	Fix 1
Title and meta description	PASS	“Napa Valley Realtors | Buy & Sell Homes | NapaListing.com” with a description.	—
Clear H1 headline	PASS	Present.	—
Images described for machines (alt text)	PASS	No images in the raw page, so there is nothing to describe (passes by default).	—
Open Graph tags	PASS	Present, so shared links show a title and preview.	—
Question-style headings	FIX	None in the raw page. AI tools quote answer-shaped sections.	Fix 3
Freshness signals	FIX	No visible dates in the raw page. The newest blog post in your sitemap is from March 5, 2026.	Bonus
Pricing transparency	FIX	No prices in the raw page. Listing prices load by JavaScript.	Fix 1
Linked profiles (socials, review sites)	FIX	No links to social or review profiles in the raw homepage. Your site settings link Facebook and X, but they only appear after JavaScript runs.	Fix 1, 3

Check	Result	What we found	Solved in
Machine-readable contact info	PASS	Phone number in the schema.	—
Online booking or purchase path	FIX	No booking link or ordering path in the raw page. A contact form and click-to-call exist once JavaScript has run.	Fix 1
Secure connection (HTTPS)	PASS	In place.	—

12 passed, 8 need a fix, 1 not scored.

BEYOND THE SCAN

Checked by Us, Not Scored

A scan can't see your accounts and profiles from the outside. We checked these ourselves on November 8, 2026 and show them separately. **They are not part of the 21 automated checks** and do not change that result.

Check	Result	What we found
Google Business Profile found and complete	FIX	Found as “Art Ramirez, Realtor”: 5.0 stars, 13 reviews. It is a service-area profile with no public address. Hours say “Open 24 hours” while other sites say 8 to 8 or 9 to 9. It has 2 photos. A second Google profile under a team name uses your phone number and website.
Recent, answered reviews	PASS	13 reviews, all five stars, with your replies on every review we read.
Apple Business and Bing Places claimed	FIX	Apple Maps shows “Claim This Place”, so the card is likely unclaimed, and its website button goes to Yelp. Bing Maps shows no card for you, although Bing's web results do show your pages.
Review-site listings current	FIX	Yelp is claimed (5.0, 38 recommended reviews). Zillow, Realtor.com and Experience.com show 0 reviews. Homes.com, LinkedIn, USDRE and MapQuest still show Compass; Unilocal and HomeASAP show Heritage Sotheby's.
AI assistants know your business (live test)	PASS	Yes, by name, on every tool we could test, though some call you a broker or show an old brokerage. Claude with no web access did not know you (next pages).
Named in “best in your area” AI answers (live test)	FIX	Mostly no. Gemini named you for two questions (personalized), and Google's map results put you first for one Spanish search. ChatGPT and Perplexity named you only when asked about you by name (next pages).

WHY WE SEPARATE THESE

Anyone can hand you a report built partly on answers you gave yourself. That's a mirror, not an audit. The 21 automated checks are the part you can defend to a skeptic. These items are real and they matter for local customers, so we report them. They just stay out of the number.

THE REAL TEST

What AI Actually Said About You

We asked the questions your customers ask, on November 8, 2026, on real Google and Bing and on ChatGPT, Gemini, Perplexity and Claude. One run each; results vary by tool, time and place. Our browser was signed in to Google, so Google and Gemini answers are personalized to us: treat them as a sample, not a neutral ranking. Microsoft Copilot needed a sign-in and was not tested.

THE SHORT ANSWER

Search your name and every tool finds you, usually with the right brokerage and license number. **Search by area or service** (“best realtor in Napa”, “who should I use to sell my house”) and you were named almost nowhere: Gemini named you for two of them, and Google's map results put you first for one Spanish-language search. Your own website is rarely the page that carries you, and several tools repeat details that are wrong or old.

Searching for you by name or website

Where we looked	Result	What came back
Google	**FOUND**	Your name: #1, through your Coldwell Banker pages, and Google's AI Overview names you correctly (Coldwell Banker Brokers of the Valley, license 01445720, salesperson). The word “napalisting.com” alone is auto-corrected to “napa listing” and shows portals; your site appears only after clicking “Search instead”, and that AI Overview calls you a “broker”.
Bing	**FOUND, WITH OLD DATA**	#1 for your name and for napalisting.com. Bing's AI summary mixes Compass and Coldwell Banker and prints your old Compass address.
ChatGPT	**FOUND**	Finds you with Coldwell Banker Brokers of the Valley and license 01445720, and notes an older Compass and Heritage Sotheby's mismatch. For napalisting.com alone it describes the site, says it got a loading page, and does not connect it to you.
Perplexity	**FOUND**	Finds you with the right brokerage and calls you a salesperson, which is correct. For napalisting.com alone it names the site but not you.

Where we looked	Result	What came back
Gemini	**FOUND, WITH ERRORS**	Finds you and ties napalisting.com to you, but calls you a “broker”, which is wrong.
Claude, no web access	**NOT KNOWN**	“I don't know.” A fresh Claude session (Sonnet 5.5), no web access, one run.
Claude with web search (run by Alejandro)	**FOUND, WITH ERRORS**	Found your license number, phone, email and Lincoln Ave office, and said you began in 2004 at Heritage Sotheby's. It called you a “broker” and said your brokerage “isn't clear” (Compass or Coldwell Banker). In a second Claude chat that used Chrome, the site worked in a normal browser, but every automated fetch got only “Loading NapaListing.com”.

Searching by area or service

YES means the tool named you as a recommendation. Each cell is one run.

Question	Google	Google AI	Bing	ChatGPT	Gemini	Perplexity
best realtor in Napa	**Snippet only**	No	No	No	**YES**	No
top real estate agents Napa CA	No	No	No	No	No	No
who should I use to sell my house in Napa	No	No	No	No	**YES**	No answer
Napa Valley realtor vineyard estate	No	No	No	No	No	No
Spanish-speaking realtor Napa	**#3**	No	No	No	No	No
agente de bienes raices en Napa que hable espanol	**Map: 1st**	No	No	No	No	No

WHAT THE TOOLS GOT WRONG OR OUT OF DATE, AND WHERE TO FIX IT

“Broker”: Gemini, one Google AI answer and Claude with web search called you a broker. Your license is a salesperson license. **Probate and trust certification:** some answers and directory listings repeat a certification we could not verify; claim only what you can show. **Old brokerage:** Compass still shows on Homes.com, an old Realtor.com listing, the “Compass profile” link on realtor-arturoramirez.com, and in Bing's summary, which prints the old Compass address. **Old phone numbers** still show on some of those pages. Fix these at the source, which is what the plan starts with.

Who the tools named instead

For the area and service questions, tools named other agents, for example Mark Lesti, Joe Brasil, Tracy Warr and Cyd Greer. For the Spanish questions they named Rigo Guijosa, Jacqueline Gaitan, Nadia Valenzuela and Ana Flores. **This is not a ranking and not a list of the best-rated agents**; we did not check ratings. Pages that rank agents (HomeLight, Clever, Agent Pronto, Homes.com, Zillow) appeared as sources.

SOLANO COUNTY AND PROBATE

In our first real Google round, a realtor search for Vacaville, Fairfield or American Canyon did not show you in the map results or the organic results. For “probate realtor Napa”, your napalisting.com/probate page appeared at the bottom of page 1. For the question from an out-of-state executor who inherited a house, Google's AI Mode and Gemini recommended you in our personalized tests; ChatGPT and Perplexity named other agents instead. That is one run each, and it says nothing about demand.

WHERE MACHINES LOOK

Your Profiles, Checked

AI tools and customers read more than your website. We opened each place below on November 8, 2026 and recorded what it says today.

Place	Status	What it says today
Yelp	**Working well**	Claimed. 5.0 stars, 38 recommended reviews (49 counting filtered ones). Lists Spanish. Says 18 years in business; your license shows 22.
Coldwell Banker pages	**Current, nothing more to show**	Current brokerage, license number and phone. Nothing more to show yet.
Google profile	**Strong, but thin**	Strong quality: 5.0 stars, 13 reviews, every one answered. Thin volume next to nearby agents, who show 28 to 83 on Google (varies by location). 2 photos; hours differ from other sites.
Zillow	**Needs a fix**	Coldwell Banker, English and Spanish. No reviews yet.
Realtor.com	**Needs a fix**	Bilingual profile with Coldwell Banker. No reviews. A second, empty “Arturo Ramirez” profile also exists.
Experience.com	**Needs a fix**	Unclaimed. No reviews.
Facebook page	**Needs a fix**	A page linked from your site: 353 followers, 4 reviews. Last post July 2024. The profile picture still shows Compass, and the page category reads “Commercial Real Estate Agency”.
napalisting.com	**Needs a fix**	395 pages in its map. A search engine downloads the page title and a loading message, not your text.
Homes.com	**Out of date**	Shows Compass as your brokerage.
LinkedIn	**Out of date**	Headline and company still show Compass. The web address reads “compas”.
USDRE	**Out of date**	Listed as “Arturo Ramirez, Compass Real Estate” with 9 reviews. Unclaimed.

Place	Status	What it says today
MapQuest	**Out of date**	Lists Compass at 1300 First St.
Unilocal	**Out of date**	Heritage Sotheby's, 10 reviews.
HomeASAP	**Out of date**	Heritage Sotheby's era listing.
Apple Maps	**Not claimed**	Shows “Claim This Place”, so likely unclaimed. Its website button goes to Yelp.
Bing Places	**Not found**	No Bing Maps card for you. Bing's web results do show your pages.
Instagram and Threads	**Active, not linked**	@naparamirez on Instagram: 67 posts, newest July 2026, with napalisting.com as the link. Threads mirrors it. Neither is linked from napalisting.com or your two other sites, whose social icons go nowhere.
Blog, Pinterest and Differ posts called “Napa Listing”	**Owner unknown**	A Blogspot blog, a Pinterest account and six Differ posts, made December 2025 to June 2026, link to napalisting.com. We do not know who runs them. Tell us if they are yours.
YouTube	**Optional**	An empty channel with 2 subscribers. Only if you want it.

THE ONE SET OF FACTS THAT SHOULD BE EVERYWHERE

Art Ramirez · DRE 01445720 · licensed since 2004 · Coldwell Banker Brokers of the Valley (since February 2025) · 1775 Lincoln Ave, Napa · 707-738-0939. Confirm the ZIP and the hours you want shown before you update anything; sources disagree (94558 and 94559; 24 hours, 8 to 8 and 9 to 9).

THE PLAN

Your 5 Priority Fixes

Ranked by impact on what machines and customers find. Impact and effort are out of 5. Fixes 1 and 2 depend on your website platform.

1. Make your page text readable without JavaScript impact 5/5 · effort 4/5

Why: Today a crawler downloads your page title and “Loading NapaListing.com”. Everything else is built after the page loads, so most AI readers never see it. This one gap limits how readable the whole site is.

Do this: Ask iHouseweb to deliver your main text, headings and links in the page source (server-side or pre-rendered). If they can't, publish a small content site on a subdomain you control. In the meantime, the platform's “Extra Code” box can carry text and structured data; confirm with iHouseweb that it lands in the page source.

2. Let the AI search tools in impact 3/5 · effort 3/5

Why: robots.txt blocks OpenAI's training crawler and Meta's two crawlers, and tells every crawler to skip your market-report and listing pages. The training blocks are a choice that belongs to you; the report pages are content you want found.

Do this: Ask iHouseweb whether robots.txt can be set per site. Decide on the training crawlers yourself (OpenAI documents a separate crawler for ChatGPT search). Open the market-report and listing paths. Ask whether the 403 some crawler names received is a platform firewall rule.

3. Upgrade your schema so it says who you are impact 4/5 · effort 2/5

Why: Your structured data names a company, not you, spells the brokerage “Coldwell Bankers”, and links to none of your profiles. AI engines use it to confirm identity.

Do this: Correct the brokerage name; add your name as text and your license number; add a sameAs list (Google, Yelp, Zillow, Realtor.com, LinkedIn, Facebook); add English and Spanish only if you want to be found for Spanish searches. Add an FAQ with visible questions and answers, marked up to match. Google's rule: markup must match what the page shows. Validate free at validator.schema.org.

4. Make every profile say the same true thing impact 5/5 · effort 2/5

Why: Six sites still show an old brokerage, hours disagree, and AI searches returned Compass for you. When profiles disagree, tools repeat the wrong one.

Do this: Update Homes.com, LinkedIn, USDRE, MapQuest, Unilocal and HomeASAP; claim Apple Business and create Bing Places (it can import from Google); show one set of hours and 10 or more photos on Google; correct the years on Yelp. Each site has its own way to update.

5. Turn your reviews into a steady habit impact 4/5 · effort 1/5

Why: You have 13 Google reviews and 38 recommended on Yelp, but Zillow, Realtor.com and Experience.com show none. Volume, recency and owner replies are trust signals for customers and for machines.

Do this: After each closing, send a direct Google review link and ask for an honest review. Never ask clients to mention a service or a city (Google's policy); put your keywords in your replies instead. Do not ask for Yelp reviews (Yelp prohibits it). Add Zillow and Realtor.com review requests.

WHY FIXES 4 AND 5 COME FIRST FOR A CALLING AND PROSPECTING BUSINESS

When you call a prospect, we think the next thing many people do is search your name (our reasoning, not tested). Fixes 4 and 5 change what they find in about two weeks and need nothing from your website platform. Fixes 1 to 3 build the second channel and take longer, because they depend on iHouseweb.

BONUS MOVE: PUBLISH ONE THING ONLY YOU CAN PUBLISH

AI can write generic content itself, so it never needs to cite someone who posts “5 tips”. What it can't generate is what happened in your business. Your reviews describe selling a family estate from out of state. One page on what an out-of-state executor needs to know in the first 30 days of selling an inherited Napa home, with real steps from your own files (client details removed or approved), is something a competitor could not paste onto their site without it being a lie. Google's own guidance calls this people-first content with a unique point of view. You explain the real estate side and point to attorneys and tax advisors for the rest.

YOUR GOOGLE PROFILE

Your Google Profile Scorecard

Item	Result	What we saw
Claimed and verified	CLAIMED	Claimed: your owner replies appear. Whether it is verified isn't visible from outside; please confirm.
100% complete	NO	Service-area profile with no public address (allowed for service businesses). 2 photos. Hours say “Open 24 hours”.
Active in the last 30 days	CONFIRM	Review activity is recent. Posts and updates aren't visible when logged out.
Reviews and responses	YES	5.0 stars from 13 reviews, answered.
Services listed	CONFIRM	Not visible to us.
Q&A seeded	CONFIRM	Hidden when logged out.

WHY THIS GETS ITS OWN SCORECARD

Google says local results come from three things: relevance, distance and prominence. Your profile is your strongest asset there, and it feeds Maps. Having one clean profile in your own name, with matching hours and a steady flow of reviews, is the plan.

A 30-DAY RHYTHM THAT WORKS

Week 1: Fix 4 (profiles) and start Fix 5 (the review habit). Weeks 1 to 2: Fix 3 (schema, through the Extra Code box once iHouseweb confirms it lands in the page source). Weeks 2 to 4: Fixes 1 and 2 (ask iHouseweb, decide between a vendor fix and a content site). Week 4: re-scan and re-run the AI tests, and compare with this report.

BEYOND YOUR WEBSITE

The Platform Playbook: Claim Every AI Surface

Each AI assistant draws business data from specific sources, and most businesses have never claimed them. Every claim below is free. Don't memorize this table; it's a reference. The sprint after it is the only to-do.

AI surface	What feeds it	Your move
ChatGPT and ChatGPT Search	Bing's index. A February 2025 Seer Interactive study (about 500 citations across 100 queries) found about 87% of ChatGPT search citations matched Bing's top results.	Register at bing.com/webmasters (it can import from Google Search Console), submit your sitemap and enable IndexNow.
Microsoft Copilot	The Bing index plus Bing Places listings.	Claim Bing Places at bing.com/forbusiness. It can sync from your Google profile.
Google AI Mode, Gemini, AI Overviews	Google's index, your Google Business Profile and your schema.	Keep one clean profile, verify your site in Search Console, keep schema valid.
Claude (Anthropic)	Web-wide presence plus live search.	Keep ClaudeBot allowed, keep facts in clean HTML and schema, and be documented across the open web.
Siri and Apple Intelligence	Apple Maps for local businesses.	Your Apple Maps card shows “Claim This Place”, so it is likely unclaimed. Claim it at business.apple.com.
Meta AI	Public Facebook and Instagram business pages.	Update your Facebook page (profile picture, brokerage, category, hours). Link your Instagram from your website so the one active channel is found.
LinkedIn	Profile pages, crawled by many engines and ranked in Bing.	Fix the headline, brokerage and web address. Link it in your schema sameAs.
Aggregators and directories	Zillow, Realtor.com, Homes.com and similar sites feed many answers.	Keep name, address and phone identical everywhere.

WHAT ABOUT NEWER AI TOOLS?

Smaller and newer tools mostly lean on the big indexes (Bing, Google, Brave) or browse your site the way an agent does. Open crawler access, readable HTML, valid schema and claimed profiles help with all of them. Chase surfaces with users, not logos.

THE 90-MINUTE CLAIM SPRINT

In one sitting: Google profile, Bing Webmaster Tools and IndexNow, Bing Places, Apple Business, then the profile updates in Fix 4. Use the same name, license number, phone and hours on every one.

WHAT HAPPENS IF YOU DO IT

What Changes If You Do It

12 of 21	17 of 21
website checks pass today	projected after the 5 fixes

Completing the five priority fixes would turn five of the eight failing checks into passes: readable text, AI engines allowed, FAQ markup, question-style headings and profile links on the homepage. That moves the checks passing from 12 of 21 to a projected 17 of 21. The freshness, pricing and booking checks are left as they are, so the projection is cautious. To be straight with you: this is a projection of the checks you would clear, not a guarantee of rankings or mentions. How fast recommendations follow depends on your market and competition, and on the platform changes in Fixes 1 and 2, which are not in your hands.

Re-measure at 30, 60 and 90 days

Ask ChatGPT, Gemini and Perplexity: “best realtor in Napa”, “sell my house in Napa”, “Spanish-speaking realtor in Napa” and “Who is Art Ramirez, realtor in Napa?”, and log whether you're named and with which brokerage. Re-scan anytime at **aoaudit.com** and watch checks turn from FIX to PASS as you fix them.

WHAT THIS REPORT DOES NOT CLAIM

We do not know how your business is doing or what would help most, and this report does not claim that visibility is the answer. The 21 automated checks measure how readable your website is to machines. They do not measure your Google rankings, your reviews, or whether AI tools recommend you; those are covered in the pages on profiles and AI tests. We did not see your Search Console, analytics, lead volume or where your website leads go. The scan read your homepage only. We tested Google and Bing (with Google's AI answers), ChatGPT, Gemini, Perplexity and Claude, with and without web search (the Google and Gemini runs were personalized to our account); Microsoft Copilot and Grok were not tested. Where sources disagreed (ZIP code, hours, sales totals on third-party sites), we did not pick one and we don't quote the totals. Nobody can guarantee AI mentions or a first-place ranking.

NEXT STEPS

What Happens Next

When	What
This week	A 15 to 20 minute call: your goals, what is working for you today, what you would like more of, how clients find you, and read-only access to your Google profile, Search Console, analytics and iHouseweb dashboard. You stay the owner of every account.
Before anything changes	We record a baseline of the checks in this report so you can see what moved.
Weeks 1 to 2	Fix 4 and Fix 5: profiles corrected, the review habit started. Fix 3 as soon as iHouseweb confirms what the Extra Code box can carry.
Weeks 2 to 4	Fixes 1 and 2: we ask iHouseweb and your broker, and choose the website path with you.
Months 2 to 3, your choice	Add the focus you pick after the cleanup: a probate page in your own words (only with credentials you can show), Spanish pages, local city pages, or short video.
Last, only if you agree	Earn recommendations from AI tools. This starts only after the cleanup is done and you tell us it is what you want to work on next.
Day 30, 60 and 90	We re-scan, re-run the AI tests and show you what changed.

YOU APPROVE EACH STAGE

Nothing changes on any account without you. Nothing on your brokerage's pages changes without your broker's approval.

BEING RECOMMENDED BY AI TOOLS COMES LAST, AND ONLY IF YOU CHOOSE IT

AI tools choose who to name from many sources: reviews, profiles, pages they can read and mentions elsewhere. If those say different things, or cannot be read, nothing we add on top helps. So the cleanup comes first: one true set of facts everywhere and a website machines can read. Then, if you agree, we work on being named: more honest reviews, pages answering the questions your clients ask, earned mentions and links (never bought or automated links), and a monthly check of the same questions on Google AI Mode, Gemini, ChatGPT and Perplexity. We cannot promise to be named, and results differ by tool, person and day. What we promise is what we do and what we measure, including when nothing changed.

THE QUESTION WORTH ASKING EVERY VENDOR

Every pass or fail in the scored checks came from our own scan of your live site, not from anything you told us. Anywhere we checked something else, we labeled it plainly and kept it out of the 21 automated checks. Carry that question into your next conversation with any vendor, including us: which parts did they verify themselves, and which parts did you tell them? A report that can't answer that isn't asking for your trust. It's asking you to skip checking.

SOURCES AND VERIFICATION

- Website checks: live scan on aoaudit.com, scanner version of November 8, 2026 (21 automated checks).
